

# WASTE MANAGEMENT

## RECYCLING

A robust recycling program is incorporated into the daily operations at the Port with everything from recycled supplies to recycling stations at all its facilities. To build on this success, the Port is working to incorporate more recycled materials into its overall operations, including additional recycled office, maintenance and custodial supplies. The Port also makes a conscious effort to recycle all used tires, and use recycled materials for its construction projects when feasible.

The Port of Everett has a strong emphasis on its recycling program and provides recycling stations at all of its facilities. The Port has more than 20 standard recycling stations that collect a variety of materials including aluminum, glass, paper and cardboard. Materials collected at each site vary depending on the needs associated with the site.

## OIL SPILL KITS

### Terminals

- 11 Oil spill equipment barrels
- 1 mobile oil spill response trailer

### Marina

- 8 Emergency oil spill kits
- 1 mobile oil spill response trailer
